Executive Performance Review (2019–2025)

Executive Summary

This report reviews financial, sales, product, customer, inventory, and supply chain performance based on the Power BI dashboard. Overall performance indicates sustained revenue growth, healthy profitability, and opportunities to improve inventory optimization, product portfolio management, and regional operations.

Key Findings

1. Strong Revenue Growth

Revenue shows a consistent upward trend across the analysis period, indicating expanding business performance.

2. Healthy Profit Margin

Profit margin remains around 39%, suggesting effective pricing and cost management.

3. Product Revenue Concentration

A limited number of product categories contribute a large share of revenue, creating concentration risk.

4. Regional Performance Differences

Profitability varies by city, highlighting opportunities to optimize regional operations.

5. Customer Segment Dependency

Corporate customers generate the largest revenue share, suggesting diversification opportunities.

6. Product Performance Variation

Top-performing and low-performing products differ significantly in profitability and revenue.

7. Inventory Optimization Opportunity

Warehouse inventory values and reorder levels vary, indicating potential stock optimization opportunities.

Recommendations

- Optimize inventory allocation across warehouses.
- Review reorder levels using demand forecasts.
- Expand high-performing product categories while improving low-performing products.
- Improve regional strategies for lower-performing cities.
- Diversify customer acquisition across market segments.
- Monitor supplier performance and payment terms regularly.
- Continue executive KPI monitoring using Power BI.

Expected Business Benefits

- Lower inventory carrying costs.
- Improved product availability.
- Higher profitability.
- Better customer retention.
- Faster executive decision-making.
- Enhanced operational efficiency.
